

■ AIR CONDITIONING

A deodorizing function that eliminates the exhaust gas smell that enters the cabin from the outside has been added to the conventional clean air filter. This clean air filter uses spreading type activated charcoal in the deodorizing layer to eliminate the exhaust gas smell.

Service Tip

- The replacement interval for the clear air filter is 8,000 km. However, it varies with the use conditions (or environment).
- Do not wash the clean air filter with water or use an air blower to clean it because the clean air filter contains spreading type activated charcoal.
