

## BODY PAINT

As with the LS400, 4 coats of paint are applied to the body of the SC400, to provide a high quality glossy look. In addition, the use of FP (Flake Phthalocyanine) paint and MIO (Micaceous Iron Oxide) paint provide sporty colors which give a feeling of depth, high gloss and thickness.

- These 2 types of paint suit the rounded form and solid styling of the SC400. The colors available are Bluish Green MIO, which uses MIO paint for a feeling of depth and gloss, and Dark Blue Mica FP, which uses FP for a feeling of depth and thickness.

### — REFERENCE —

*Flake Phthalocyanine : Normally used as a color pigment, this base pigment crystallizes in flake form. Since these flake phthalocyanine are semi-transparent, they have the characteristic that when they reflect light, they have a bronze color, and when they transmit light, they are seen as blue.*
