

# 1. Introduction

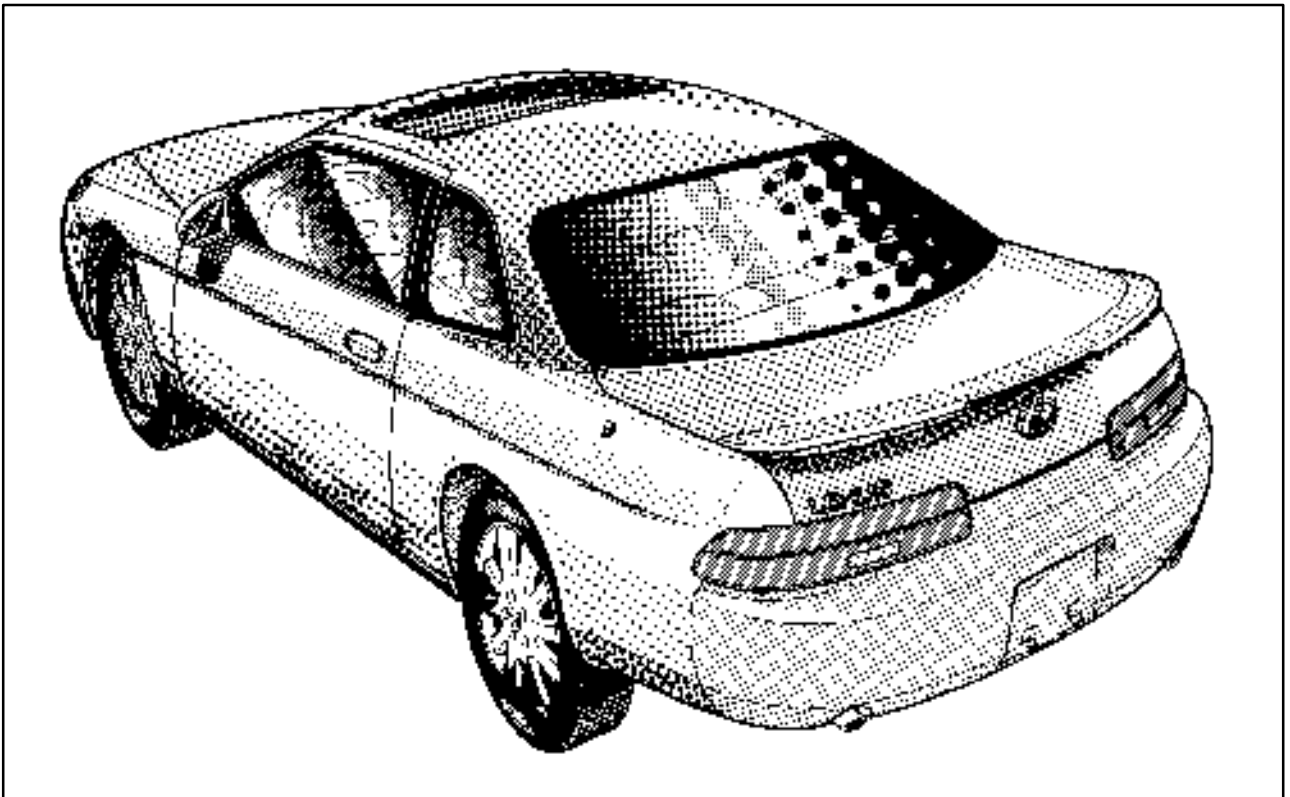

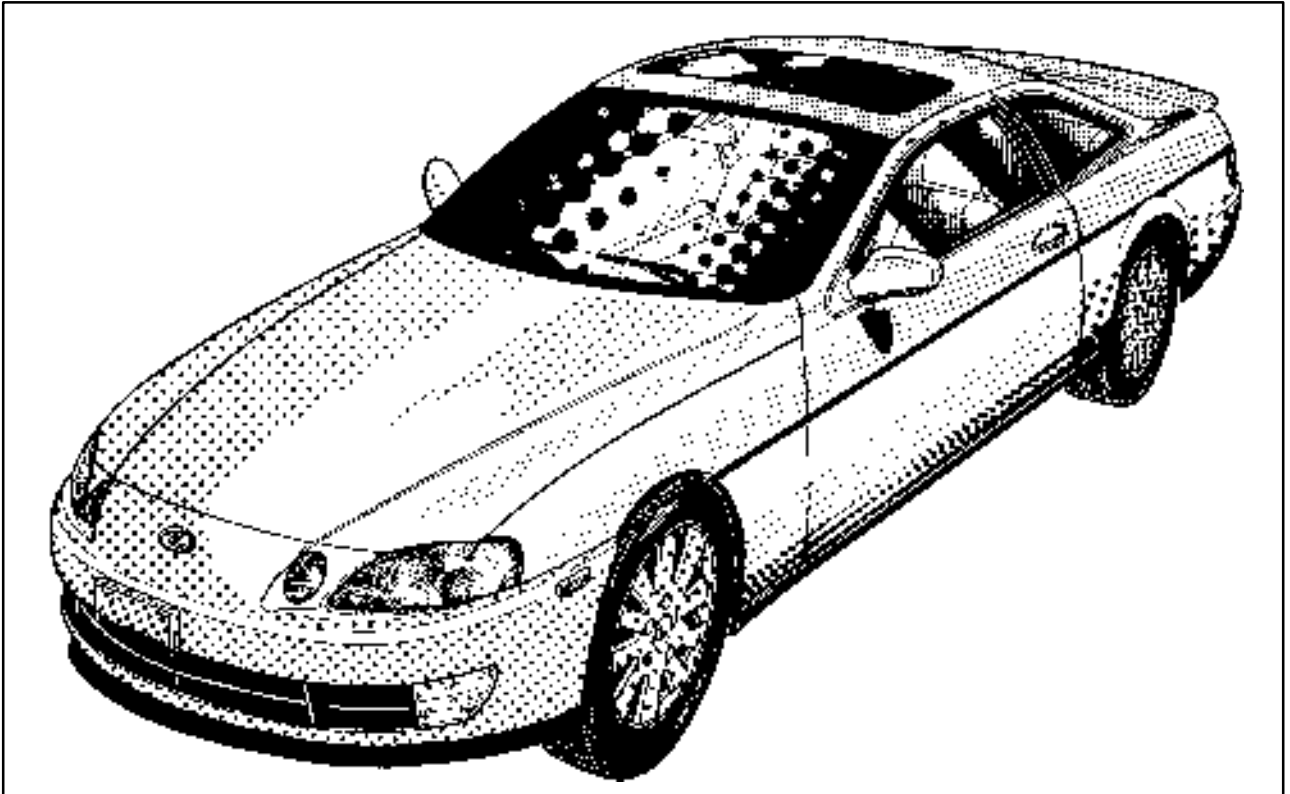

## DEVELOPMENT OBJECTIVES

The SC400 was developed as a distinctive Lexus luxury sports coupe which combines the high class feel, advanced technology, high quality, prestige and safety of the Lexus brand with a hitherto unseen boldness and a unique fusion of style and performance.

The major development objectives of the SC400 are as follows:

- Top class basic vehicle characteristics which provide surpassing dynamic performance, with sporty steering stability and riding comfort to match that dynamic performance.
- The rounded shape and flowing silhouette give it a carefree form; this combined with the side view and the stable front and rear view give the SC400 a sporty, highly advanced look which projects high class status.
- Advanced technologies, such as systems controlled by an ECU (Electronic Control Unit), are used widely.
- Equipment which provides safety and performance worthy of a high class, high performance car is installed.
- An interior which provides the spaciousness and comfort of a high class car and reduced N.V.H. (Noise, Vibration and Harshness).
