

LEXTREME SUPERCHARGER BRACKET INSTALLATION INSTRUCTION

“THE FISH”

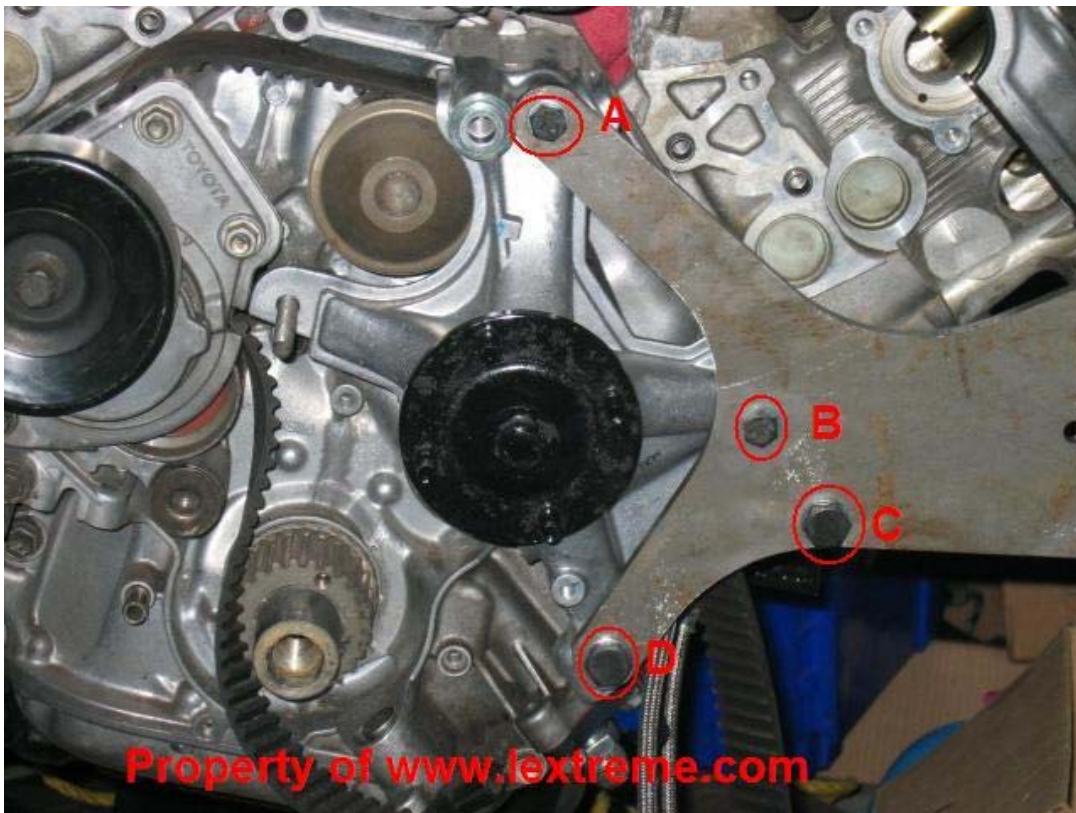

The installation of The Fish is pretty easy. Here are the things you need to relocate:

- Relocate the battery to the trunk
- Rotate the fuse box for the SC400 only
- Replace hydraulic fan pump for the SC400 only and replace with a LS400 fan bracket along with the bracket pulley.
- Relocate driver side igniter
- Possible re-route some small wires and vacuum lines

Here is what you need to align the bracket. The picture below is the reference. The locations of the mounting points are from A, B, C, D. The washers are placed between the fan bracket and The Fish plate.

- A: 4 washers (small washers)
- B: 3 Washers (small washers)
- C: 4 Washers (large washers)
- D: 3 Washers (large washers)

You should also place a washer at the head of the bolt with the plate too. This instruction is only for the plate alignment.

Note: Make sure you remove all oem studs/bolts from mounting points A to D.
